This DNA purification chapter addresses general information on the basics of DNA isolation, plasmid growth

and DNA quantitation as well as how purification by silica can help increase your productivity so you spend less time purifying DNA and more time developing experiments and analyzing data.

This chapter describes and evaluates various solutions to common parking problems, including sharing, regulating and pricing of parking facilities, more accurate requirements, use of off-site parking facilities, improved user information, and incentives to use alternative modes.

Online TDM Encyclopedia - Parking Solutions

Aeroponics is the process of growing plants in an air or mist environment without the use of soil or an aggregate medium (known as geponics). The word "aeroponic" is derived from the Greek meanings of aer (ἀήρ, "air") and ponos (πόνος, "labour"). Aeroponic culture differs from both conventional hydroponics, aquaponics, and in-vitro (plant tissue culture) growing.

Aeroponics - Wikipedia

In computer engineering, microarchitecture, also called computer organization and sometimes abbreviated as µarch or uarch, is the way a given instruction set architecture (ISA), is implemented in a particular processor. A given ISA may be implemented with different microarchitectures; implementations may vary due to different goals of a given design or due to shifts in technology.

Microarchitecture - Wikipedia

Ethanol precipitation is a commonly used technique for concentrating and de-salting nucleic acids (DNA or RNA) preparations in aqueous solution. The basic procedure is that salt and ethanol are added to the aqueous solution, which forces the precipitation of nucleic acids out of solution. After precipitation the nucleic acids can then be separated from the rest of the solution by centrifugation.

Ethanol Precipitation of DNA and RNA: How it works
