Monitoring & Control. The RCT is a real alternative to Current Transformers. Designed for the permanently installed industrial market, the RCT range offers all the advantages of Rogowski Coil technology with the addition of industry standard interfaces for quick and easy connection to process control and monitoring equipment.

A variety of types of electrical transformer are made for different purposes. Despite their design differences, the various types employ the same basic principle as discovered in 1831 by Michael Faraday, and share several key functional parts.

The ADE9078 is a highly accurate, fully integrated energy metering device. Interfacing with both current transformer (CT) and Rogowski coil sensors, the ADE9078 enables users to develop a 3-phase metrology platform, which achieves high performance for Class 1 up to Class 0.2 meters. The ADE9078 integrates seven high performances ADCs and a flexible

Maximum Flexibility for High-Density Monitoring. The PowerScout 24 is a versatile, multi-channel instrument. The modular design allows it to be configured for monitoring multiple electrical circuits (sharing a common voltage source) or for current-only monitoring of branch circuits.

A current transformer (CT) is a type of transformer that is used to measure alternating current (AC). It produces a current in its secondary which is proportional to the current in its primary. Current transformers, along with voltage or potential transformers, are instrument transformers. Instrument transformers scale the large values of voltage or current to small, standardized values that ...
